1. Overview

1.1. Introduction

The SNR-VP-53 is a featured 3-line IP phone with full duplex hands-free speakerphone. It can be directly connected to an Internet Telephony Service Provider or to an IP PBX.

Based on the SIP standard, the SNR-VP-53 has been tested to ensure comprehensive interoperability with equipment from VoIP infrastructure leaders enabling service providers to quickly roll-out competitive, feature rich services to their customers.

SNR-VP-53 is very easy to understand, configure, and deploy. The web interface is designed to provide a clean and user-friendly configuration window so that users won't get lost in complicated menus and maintenance.

1.2. Features

➢ Highlights

- •HD Voice
- •Up to 3 SIP Accounts
- •2.9" 132x64 Graphical LCD with Backlight
- •Support 3-way Conference
- •Support PoE
- •Full Compatible with Asterisk, Avaya, BroadSoft Platform

Phone Features

- •Support call waiting, call forwarding, call transfer
- ●Call on hold, mute, auto-answer, redial
- •Phonebook (500 groups), Blacklist (100 groups), call logs (100 entries)
- ●LDAP
- •DND (Do Not Disturb)
- •Volume adjustable, ring tones selectable
- •5 Remote Phone Book URL supported
- •Call Pickup/Group Call Pickup
- Speed Dial
- Intercom
- Daylight Saving
- Network Packet Capture
- •Country Ringtone Signal
- •Direct IP call
- Auto Answer
- Hotline
- •XML Browser
- Hot Desking
- Keypad Lock
- Action URL/URI
- •Multi-Languages: Default: English and Simple Chinese

IP-PBX Features

- •Dial Plan
- •Wideband Codec: G.722

- •HD Voice
- •SMS, Voicemail, MWI message Notification
- •Narrowband Codec: PCMA, PCMU, G.729, G723_53, G723_63, G726_16, G726_24, G726_32, G726_40
- ●VAD, CNG , Echo Canceller
- Full-Duplex Speakerphone

Network Features

- •SIP V1(RFC2543), V2(RFC3261)
- Static IP/DHCP for IP configuration
- •3 DTMF modes: In-Band, RFC2833, SIP INFO
- •HTTP/HTTPS Web Server for Management
- •NTP for Auto Time Setting
- •TFTP/FTP/HTTP/HTTPS Protocols
- •802.1Q VLAN

Administration Features

- •Auto provisioning using FTP/TFTP/HTTP/HTTPS/PnP
- Dial through IP PBX Using Phone Number
- Dial through IP PBX Using URL Address
- •Configuration Managements with Web, keypad on the phone, and Auto Provisioning
- ●SNMP
- •TR069

Security Features

- •Support HTTPS (SSL)
- •Support SRTP for Voice Data Encryption
- •Support Login for Administration
- •SIP Over TLS

2.2. Connection diagram

2.3. Installation Steps

Step 1 – Connect the power

Connect the provided power adapter to the Power port and plug the adapter into an available power outlet. The LCD will display "Initializing, Please Wait..."

Note1: Never use a power adapter other than the one provided with SNR-VP-53 Note2: Only Internet port supports POE.

Step 2 – Connect to the Internet

Connect one end of the RJ-45 Ethernet cable to the Internet port at the back of the SNR-VP-53 and the other end to wall network jack.

Step 3 – Connect the computer

Connect one end of the RJ-45 Ethernet cable to the PC port at the back of the SNR-VP-53 and the other end to the Ethernet port on you computer.

Step 4 – Configure the device

Launch the web browser on your computer, and enter the IP address of the phone into the address bar. The login screen will appear if the address is correct. Enter the user name and password to log into the web console.

NOTE: Each phone has its own IP address, you can check it by press the OK key on the keyboard when the phone is idle

3. Functions

3.1. Make a call

3.1.1. Call devices

User can make a phone call via the following methods :

1. Pick up the handset, **C**icon will be shown on the idle screen.

2. Press the Handfree key, icon will be shown on the idle screen.

3. Press the Headset key if the headset is connected to the Headset Port in advance.

The **icon** will be shown on the idle screen.

User can also dial the number first, and then choose the method user will use to speak to the other party.

3.1.2. Call Methods

User can press an available line key if there is more than one account, then

1. Dial the number User wants to call.

2. Press History softkey. Use the navigation keys to highlight User choice (press

Left/Right key to choose Missed Calls, Incoming Calls and Outgoing Calls.

3. Press the Redial key twice to call the last number called or press Redial key to enter All Calls interface to choose the number to dial out.

4. Press the programmable keys which are set as speed dial key. Then press the Send key or Dial softkey to make the call if necessary.

3.2. Answer a call

1. If User is not on another phone, lift the handset to use, or press the Speaker key/

Answer softkey to answer using the speaker phone, or press the headset key to answer the headset.

2. If User is on another call, press the answer soft key to answer new incoming and hold the

current talking. During the conversation, User can alternate between Headset, Handset and Handfree by pressing the corresponding keys.

Note: The will flash during the Incoming interface

3.3. Mute

You can press the Mute key to make the user NOT be heard by the other party, but user can hear the other party, and icon will be shown on the LCD, and press the Mute key again to recover.

3.4. Call Hold/Resume

1. Press the Hold button or Hold softkey to put User active call on hold.

2. If there is only one call on hold, press the hold softkey to retrieve the call.

3. If there are more than one call on hold, press the line button, and the Up/Down button to highlight the call, and then press the Resume button to retrieve the call.

3.5. Do Not Disturbed (DND)

If you enable DND mode, the phone will reject to answer all calls automatically and play busy tone, the UI will present missed calls at the same time.

3.6. Call Waiting

To configure Call Forward via Phone interface:

- 1. Press Menu -->Features-->Call Waiting-->Enter.
- 2. Use the Left or Right key to activate or deactivate call waiting.
- 3. Then press the Save key to save the changes.

3.7. Call Forward

You can set the static forward to switch all the incoming calls to specified number; Also you can use dynamic forward to switch all the incoming calls forward to the number inputted when the phone is ringing.

Forward: Enable call forward feature, Options as follows :

- Always forward: All the incoming calls will be the Switched unconditionally to specified number.
- Busy Forward: The incoming calls will be the Switched to specified number when the phone is busy.
- No answer Forward: The incoming calls will be the Switched to the specified number when the ring tones is time out without answer.

To configure Call Forward via Phone interface:

1. Press Menu -->Features-->Call Forward-->Enter, or just press FWD key to enter Call Forward interface.

2. There are 3 options: Always, Busy, and No Answer.

3. If User chooses one of them, enter the phone number User wants to forward to receiving party. Press Save to save the changes.

3.8. Call Transfer

You can use the following two ways to transfer talking to the other party :

- Blind Transfer: Transfer talking directly to the other party without any negotiation.
- Consultation Transfer: Transfer talking to the other person involved after the other person involved answer the incoming and with consultation.

3.8.1. Blind Transfer

- 1. Press the Trans soft key during the talking;
- 2. Enter the Trans number interface, and then Input the number you will transfer to;

3. Press the FWD key or the Trans soft key to transfer the hold talking to the number you want to transfer to;

4. Return to the Idle automatically;

Note: The UI will display Hold status interface when the number you want to transfer to is not existed.

3.8.2. Consultation Transfer

1. Press the Trans soft key to enter the number you want to transfer to during the talking; Input the number you want to transfer to ;

2. Press the OK key on the phone keyboard or the Dial key to make a call;

3. Press the Trans soft key to finish transfer after the other person involved answer the incoming and with consultation; You can finish transfer via putting down the handset or press the Cancel soft key to cancel transfer if you currently use handset to make or answer a call_{\circ}

3.9. Conference

You can use the local conference feature to hold a 3-way conference by pressing the Conference soft key to invite the current talking and one line talking held to attend conference. The Network conference feature allows you to add or delete the party who attend the conference.

The local conference feature of IP phone SNR-VP-53 can invite two parties at most to attend conference. The conference type of IP phone SNR-VP-53 is Local conference with default.

3.9.1. Create Local Conference

1. Create talking with first party;

2. Press the New soft key to create a new talking;

3. Press the Back soft key of dial interface to hold talking with first party.

4. Input the number of second party and press the OK key on the phone keyboard or the Dial key or the Send soft key to make a call; When the second party answer your call, inquire whether they want to attend conference ;

5. Press the Conference soft key to start 3-way conference.

6. Press the Split soft key to split to two lines standalone talking, then this two parties talking are under Hold status:

7. HOLD Press the Resume soft key to resume the current talking:

8. Press the Cancel soft key or the 🗩 key to cancel the conference talking and return to Idle :

3.9.2. Make two lines talking attend conference

1. Use two different accounts to create two lines talking in the phone(For example, use account 1 to create line 1 talking and account 2 for line 2).

2. Press the Up or Down key on the phone keyboard to select the talking you will create for conference, the talking must be on activated status (For example, select the talking in account

1)

3. Press the conference soft key to add the two lines talking to conference.

Note: You can press the Hold soft key to hold the conference, also you can press the Split soft key to split the conference to two standalone talking, press the Cancel soft key to end conference $_{\circ}$

3.10.Call Park

You can use Call Park feature to park the current talking, and then resume the Parking talking in another phone (For example, in another phone of another office or conference). Press the Call Park key to park the current talking during the talking. If success, you will hear voice announce or see the reserved extension number on the phone LCD. Dial the reserved extension number in another phone to resume the Parking talking.

Note: Not all server can support Call Park feature.

To configure Call Park via Phone interface:

PATH: Press Menu-->Features-->Call Park-->Press Left or Right key or Switch soft key to enable Call Park--> Press the Down key to set Target number-->Press the Down key to set

Account-->Press the Save soft key to save;

3.11.Pickup

You can use pickup to answer other users' incoming call. The IP phone SNR-VP-53 supports

specified pickup and group pickup.

Note: Press the group pickup only to answer line 1 incoming call if there are many lines incoming calls in group.

3.11.1.Specified Pickup

Specified pickup can answer specified user's incoming calls

1. Set specified pickup key via phone interface,

PATH: Press Menu-->Features-->Programmable keys-->Soft Keys-->PickUp-->Press Down key to set label/Value--> Save soft key;

2. Use specified pickup feature

When the user of specified pickup number is off or busy, you can press the pickup key to answer incoming call.

3.11.2. Group Pickup

Group pickup can answer group's user incoming calls. Group pickup needs to set group members.

1. Set group pickup via phone interface

PATH: Press Menu-->Features-->Programmable keys-->Soft Keys-->Group PickUp -->Press Down key to set label/Value/Account--> Save soft key;

2. Use group pickup feature

When anyone in group receives an incoming call, You can press the group pickup key to answer.

3.12.Speed Dial

You can use the Speed Dial feature to dial the specified contact speedily

PATH: Press Menu-->Features-->Programmable keys-->Soft Keys-->Speed Dial -->Press Down key to set label/Value/Account--> Save soft key;

3.13.Auto-redial

When hang-up by the other party, call failure during the calling, the phone will enter the auto-redial screen, and begin to count. Press OK for redial now or wait for the time is up. After trying the times of setting of auto-redial, the phone will hang-up automatically.

To configure Auto Redial via Phone interface:

1. Press Menu -->Features-->Auto Redial-->Enter, ;

2. Use the Left or Right key to activate or deactivate Auto Redial.

3. Use the Up or Down key to configurate Interval and Times;

4. Then press the Save key to save the changes.

3.14.Hot line

The Hot line refers to the number you often dial. You can set hot lines in the phone, the phone will dial the hot line number automatically when you pick up the handset, press the hand-free or the account key. Also you can set the timeout of dialing the hot line number, then the phone will dial the hot line number automatically after the timeout.

To configure Hot line via Phone interface:

1. Press Menu -->Features-->Hot line-->Enter

2. Use the Left or Right key to activate or deactivate Hot line.

- 3. Use the Up or Down key to configurate Number and Timeout;
- 4. Then press the Save key to save the changes.

3.15.Intercom

To configure Intercom via Phone interface:

PATH: Press Menu-->Features-->Programmable keys-->Soft Keys-->Intercom--> Press Down key to set label/Value/Account--> Save soft key;

- 1. Press the Intercom key when the phone is available. The phone will connect the extension number of remote user automatically $_{\circ}$
- 2. Press the Intercom key or the Back soft key to end the intercom.

- 3. Answer the intercom incoming calling
- 4. In default situation, the IP phone SNR-VP-53 will answer the intercom incoming calling automatically and make a noise. You can set the phone to enable silent mode when picking up the intercom call so that the other will not hear you $_{\circ}$

The features of intercom :

Intercom Feature	Note		
Allow Intercom	Enable or disable Auto-receive intercom		
Intercom Mute	Enable or disable Mute mode after receiving intercom incoming		

3.16.HotDesking

In some working place, the people are always walking around. HotDesking feature will make the staffs login his account on any computer in the company. In some public places, the working people is not fixed, anyone can use HotDesking for logging his account, and setting the phones to the familiar mode. Such as the remote function of the computer.

3.16.1.Set the HotDesking Key

To configure Intercom via Phone interface:

PATH: Press Menu-->Features-->Programmable keys-->Soft Keys-->HotDesking--> Press Down key to set label--> Save soft key;

3.16.2. HotDesking Feature :

- 1. After setting the HotDesking on Soft-key, back to the idle screen:
- 2. Pressing the HotDesking, and enter the HotDesking screen:
- 3. If you press clear on the screen, the phone will begin to clear the information stored on the phone :
- 4. After clear the setting, the phone will enter the account setting screen :
- 5. After entering the account information, back to the home screen, and begin to use the new account.

3.17.XML Browser

XML Browser allows the users to develop and deploy custom services. Users need to pre-configure a custom service functions on the server, such as news, weather report, stock information. The user receives and displays the service information on the IP phone from the server, and all service information are transmitted in XML object.

To configure XML Browser via Phone interface:

PATH: Press Menu-->Features-->Programmable keys-->Line Keys/Soft Keys/Function keys/DSS keys(DSS keys only for Tiptel3230)-->XML Browser--> Press Down key to set Label/Value--> Save soft key;

3.18.Call Recording

You can record calls by pressing a record key on the phone. The IP phone only supports record.

• Record: The phone sends SIP INFO message containing a specific header "Record: on/off " to trigger a recording.

Note: Call record is not available on all servers. Contact your system administrator for more information.

To configure a record key via phone user interface:

PATH: Press Menu-->Features-->Programmable keys-->Line Keys-->Record--> Save soft key;

Note: The way in which you listen to the recordings may be different on different servers. Contact your system administrator for more information.

3.19.Keypad Lock

You can lock the keypad of your phone temporarily when you are not using it. This feature helps to protect your phone from unauthorized use.

Keypad Lock can be set to ON or OFF, how long to enable this function during the phone is idle and you can choose to lock the function keys or all keys. And this function can only be configured through the web UI, please refer to the web interface for the details.

- Function Keys: The function keys are locked. You cannot use the LIINE KEYS, MESSAGE KEY, SOFT KEYS, NAVIGATION KEYS, and FUNCTION KEYS until unlocked.
- All Keys: All keys are locked.

3.20.Busy Lamp Field (BLF)

Busy Lamp Field (BLF) is used to monitor a specific user for status changes on IP phones. For example, you can configure a BLF key on a supervisor's phone to monitor the phone user status (busy or idle). When the monitored user places a call, a busy indicator on the supervisor's phone indicates that the user's phone is in use.

BLF LED Mode

BLF LED Mode provides two kinds of definition for the BLF key LED status.

Line key LED

LED Status	Description
Solid green	The monitored user is idle.
Fast flashing green	The monitored user receives an incoming
	call
Slow flashing green	The monitored user is dialing.
	The monitored user is talking.
Off	The monitored user does not exist.

To configure a BLF key via phone user interface:

PATH: Press Menu-->Features-->Programmable keys-->Line Keys -->BLF--> Save soft key;

3.21.BLFListCode

BLF List : While using BroadSoft platform, the accounts which are monitored by the sip phone will reply the subscribe news in the form of xml list to improve efficiency.

BLF List Code : While using BroadSoft platform, when press BLF List key configured the BLF LIST CODE, can Pick up call or Barge in call.

Note: BLFListCode is supported by Broadsoft platform, Please consult your administrator further information.

3.22.Automatic Call Distribution(ACD)

Automatic Call Distribution (ACD) enables organizations to manage a large number of phone calls on an individual basis. ACD enables the use of IP phones in a call-center role by automatically distributing incoming calls to available users, or agents. ACD depends on support from a SIP server. ACD is disabled on the phone by default. You need to enable it on a per-line basis before logging into the ACD system.

To configure a ACD key via phone user interface:

PATH: Press Menu-->Features-->Programmable keys-->Line Keys/DSS keys(DSS keys only for Tiptel3230)-->ACD--> Save soft key;

3.23. Hoteling

Hoteling function enables the customer to login the own sip account on the Host ip phone, after login to the phone, the customer can use his own guest account on the host ip phone.

Note: Hoteling is supported by Broadsoft platform, Please consult your administrator further information.

Application :

1、Remote Work

1.1. User goes to the branch office, his own extension number is 4723 in head office;

1.2. User uses the remote work function, find an idle host ip phone;

1.3. User can login the extension number 4723 on this host ip phone, to call in and out using his own extension number.

2、Work on different time division

2.1. Users A and B work on different time division at a same table with a same host ip phone, their extension numbers are 4722 and 4723.

2.2、 A logins the extension number 4722 in the morning, logout after leave.

2.3、B logins the extension number 4723 in the evening, using the number 4723 to call in

and out, logout after leave.

The host ip phone number is 2404984721

4. Settings

4.1. Basic Settings

4.1.1. Language

You can change the language through below method: Press Menu -> Settings -> Basic Setting -> Language

4.1.2. Date & Time

1. The IP phone displays Time and Date in Idle status. You can set the Time and Date obtain from SNTP server automatically or you can set the time and date manually.

2. Set SNTP via phone interface: Access Menu -> Settings -> Basic Setting -> Date & Time -> SNTP Setting.

3. To set the date & time format via the phone interface, access Menu -> Settings -> Basic Setting -> Date & Time -> Format Setting:

- Access the Time Format in Format Setting interface, then press the Left or Right key on the phone keyboard, or the Switch soft key to select the time format (12Hour or 24Hour).
- In the Date &Time Format interface, press the Up or Down key on the phone keyboard to access the Date Format. Press the Left or Right key on the phone keyboard or the Switch soft key to select the date format to process setting.
- The phone support four Date formats. The selected date format will appear in the Idle. For example, if the time was "2011-09-13", the date formats in the menu and the corresponding formats displayed in the Idle as follows:

Date Format	e.g.(2013-09-13)
YYYY-MM-DD	2013-09-13
YYYY/MM/DD	2013/09/13
DD-MM-YYYY	13-09-2013
DD/MM/YYYY	13/09/2013

4.1.3. Backlight

Set the screen backlight level and duration of backlight

Press Menu -> Settings -> Basic Setting -> Backlight

4.1.4. Password Setting

This function is to set into the advanced Settings password

Press Menu -> Settings -> Advanced Setting -> Password Setting

A dialog box "Enter Password:" appears, enter the password: admin (default), then Press the OK key on the phone keyboard, Input the currently password, the new password, then confirm new password to modify the current password.

4.2. Sound Settings

4.2.1. Phone Volume

1. The Volume key can be used to adjust the volume of handset, hands-free or headset during a call. Also, the key can be used to adjust the ring tones volume in the Idle mode.

2. Adjust the volume via the phone interface, access Menu -> Settings -> Basic Setting -> Phone Volume. In the Volume Setting interface, access the Handset Volume, Hand-free Volume or Headset Volume interface, then press the + or - soft key or Left or Right key to adjust the volume. Press the Save soft key to save the operation or press the Back soft key to cancel operation_{\circ}

4.2.2. Ring Tones

1. The Ring Tone refers to incoming ring tone, which remind the user that new call is coming with the phone. The IP phone SNR-VP-53 supports phone ring tone to distinguish the incomings from other near phones' ring tone; Besides, The IP phone SNR-VP-53 support specifying different incoming ring tones for muti-accounts in one phone equipment, At the same time, the IP phone SNR-VP-53 also support setting specific incoming ring tone for contacts.

2. To set the ring tone via the phone interface, access Menu -> Settings -> Basic Setting -> Ring Tones $_{\circ}$

4.3. Phone Book

4.3.1. Local Phone Book

The Local Phone Book is used for storing the contacts names and number. The SNR-VP-53 can store up to 500 entries contacts. You can add, edit, delete, search, or call any contact from the Local Phone $Book_{\circ}$

4.3.1.1.1.Add contacts manually :

Add contacts manually from the Local phone book via Phone interface: Press Phone book -> Local phone book -> Add to Contacts.

Select the relevant group (For example: contacts) and Press the OK key on the phone keyboard or the Enter soft key in the UI to enter All Contacts :

1. Press the Add soft key to enter the Add Contact interface :

2. Input name in the relevant area :

3. Press the Down key on the phone keyboard to input the office number in the relevant area :

4. Press the Down key on the phone keyboard to input mobile number in the relevant area :

5. Press the Down key on the phone keyboard to input other number in the relevant area :

6. Press the Down key on the phone keyboard to enter Account selection; Press the Left or Right key on the phone keyboard or the Switch soft key to select the relevant account, if Auto selected, the phone will select the current available account automatically when the contact called from Local phone book_o

4.3.1.1.2.ADD contact from All Calls History :

Add contact from All Calls History in the phone interface:

1. Press the History soft key;

2. Press the Up or Down key on the phone keyboard to select the contact you want to add;

3. Press the Option soft key to add to $contacts_{\circ}$

4.3.1.1.3.Search Contacts

1. Press the Book soft key in the Idle interface to enter the Phone Book menu :

2. Select the Local Phone Book, Press the OK key on the phone keyboard or the Enter soft key

to enter the Local Phone Book :

3. Press the Search soft key to search contacts :

4. Input keywords such as name, any character of number or whole phone number, press the Search soft key or the OK key to enter the Search Contacts interface.

4.3.2. Blacklists

100 Blacklists contacts are available with VP-53 IP phone. You can add, edit, delete, search or

call contact. The phone will reject to answer automatically within the blacklists contacts'

incoming call.

PATH: Press Phone book -> Blacklist -> Add.

4.3.3. Remote Phone Book

1. Access the remote phone book, add the contacts to the local phone book from the remote phone book or make calls from the remote phone book. 5 URLs of remote phone book is available to set_ \circ

2. Set the remote phone book via web interface :

- 3. Access Book-> Remote Phone Book $_{\circ}$
- 4. Input URL of phone book_ $\,$
- 5. Input the phone book name_ $\,$
- 6. Click the Submit key to submit_ $\ensuremath{\scriptstyle\circ}$
- 7. Access the remote phone book via phone interface :
- 8. Access Book->Remote phone book_o

9. Select the relevant Remote Group and press the Enter soft key. The phone will load the remote group information, and the LCD will display the contacts of this remote group_o

10. Press the (be where (be a soft key to unlink.)

11. Press the Book soft key to enter the Phone Book Menu :

4.4. History Management

The History management of IP phone SNR-VP-53 contains dialed calls, received calls, missed

calls and forwarded calls and support 100 logs storage at most. You can check the history,

make calls from the calls history and delete the calls history $\ _{\circ}$

- 1. Press the History key, the LCD will display all the recent calls ;
- 2. Press the Left or Right key on the phone keyboard to switch the lists of All Calls, Dialed Calls, Received Calls, Missed Calls and Forwarded Calls ;

- 3. Press the Up or Down key on the phone keyboard to select the log;
- Press the Option soft key and select the detail. The LCD will display the detailed information of this log; Press the Dial soft key, to make a call from the History;
- Press the Option soft key to add to contacts(Move to Blacklists) from the History;
- Press the Delete soft key to delete calls log from the History;
- Press the Option soft key to select "Delete all" to delete all the calls log from the History

4.5. System Customizations

4.5.1. Programmable keys

1. Press the Menu soft key in the Idle interface, access Menu->Features-> Programmable keys ;

- 2. Select the programmable key you will set and press the Enter soft key ;
- 3. Select key style in the type area ;
- 4. Input suitable value in the label area;
- 5. (Optional) Select the relevant account in the account ID area ;
- 6. (Optional) Input suitable value in Value blank;
- 7. Press the Save soft key to save or the Cancel soft key to cancel $_{\circ}$

4.5.2. SIP Account management

You can register one account or multi-account, but also can you set one account key or

multi-account keys for one account_{\circ}

4.5.2.1.Register an Account

Register an account via phone interface :

1. Press the Menu soft key to enter setting interface to select advanced setting, input

password(password: admin) to select account;

- 2. Select the account you want to set and press the Enter soft key;
- 3. Select "Enable" in the account activation status area ;
- 4. Input the label, display name, register name, account, password and SIP separately ;
- 5. Press the Save soft key to save or the Back soft key to cancel;
- 6. Repeat step 2 to 5 to finish all the account register $_{\circ}$

4.5.2.2. Disable an Account

- 1. Access Menu->Settings->Advanced setting->Account(password: admin).
- 2. Select the account you want to disable and press the Enter soft key.
- 3. Select "Disable" in the account active status area.

4. Press the Save soft key to save or the Back soft key to cancel.

Note:

1. The operation and interface of account 2 and 3 is the same as account 1;

2. you can configurate multi-account keys for one account. The incoming calls of this account will be divided equally to different account key; Analogously, the dialings also will be divided equally.

4.6. Basic Network Settings

Through the Basic Network setting, you can set the IP Phones to get the IP address by three

ways : DHCP, static IP and PPPoE, also can set the VLAN, PC port mode.

PATH: Menu -> Settings -> Advanced Setting -> Network

4.6.1. DHCP Mode

1. In the Network Settings interface, Press the OK key on the phone keyboard or the Enter soft key to enter LAN Port :

2. In the LAN Port interface, press the Up or Down key on the phone keyboard to select DHCP (default is DHCP).

3. Press the Enter on the soft key or the OK key on the phone keyboard to enter the DHCP switch interface, it will auto return to last interface after seconds.

4.6.2. Static IP Mode

1. In the LAN Port interface, press the Up or Down key on the phone keyboard to select Static IP, then Press the OK key on the phone keyboard or the Enter soft key to enter Static IP Setting interface and input IP address.

2. Press the Down key on the phone keyboard to enter the Subnet Mask of Static IP Setting and input the subnet mask.

3. Input the IP address, Subnet mask, Gateway, DNS 1 and DNS 2 in the corresponding area, Press the OK key on the phone keyboard or the Save soft key to save.

4.6.3. PPPoE Mode

1. In the LAN Port interface, press the Up or Down key on the phone keyboard to select PPPoE, then Press the OK key on the phone keyboard or the Enter soft key to enter PPPoE Setting interface.

2. Press the Up or Down key on the phone keyboard to enter User Name, Password:

3. In according areas input User Name, Password;

4.6.4. Configure PC Port Mode

1. In the Network Settings interface, press the Up or Down key on the phone keyboard to select PC Port, press the OK key on the phone keyboard or the Enter soft key to enter PC Port configuration interface :

2. In the PC Port configuration interface, press the Up or Down key on the phone keyboard to select Bridge mode or Routing mode:

3. Configured Bridge mode, there will pop-up "Reboot Phone"; Press OK key to reboot (PS : Setting will take effect after reboot)

4. If cancel the reboot, the Settings will be saved but not take effect;

5. Configured Routing mode, enter routing setting interface, input according value in the corresponding position;

6. Press Save key after configuration, the phone will reboot ;

4.6.5.Configure VLAN

In the Network Settings interface, press the Up or Down key on the phone keyboard to select

VLAN Port, press the OK key on the phone keyboard or the Enter soft key to enter LAN Port configuration interface :

LAN Port

 In the LAN Port interface, press the Up or Down key on the phone keyboard to select LAN Port, press the OK key on the phone keyboard or the Enter soft key to enter LAN Port :
 In the LAN Port interface, press the Up or Down key on the phone keyboard to configure the functionality Enable, VID, Priority:

3. When the VID is empty, press the OK key on the phone keyboard or the Save soft key to save, the prompt interface will display as below :

4. Save it after configuration, the phone will prompt as below :

PC Port

 In the PC Port interface, press the Up or Down key on the phone keyboard to select LAN Port, press the OK key on the phone keyboard or the Enter soft key to enter PC Port :
 In the PC Port interface, press the Up or Down key on the phone keyboard to configure the functionality Enable, VID, Priority: 3. When the VID is empty, press the OK key on the phone keyboard or the Save soft key to save, the prompt interface will display as below :

4. Save it after configuration, the phone will prompt as below :

4.7. WebServer

In the Advanced Setting interface, press the Up or Down key on the phone keyboard to select "WebServer," press OK key on the phone keyboard or the Enter soft key to access the disable/enable WebServer settings.

4.8. Reset to Factory

In the Advanced Setting interface, press the Up or Down key on the phone keyboard to select "Reset to factory", Press the OK key on the phone keyboard or the Enter soft key to access the reset to factory interface:

4.9. Reboot

This is a function to set the phone reboot.

1. In the Advanced Setting interface, press the Up or Down key on the phone keyboard to select Reboot;

2. Press the OK key or the Enter soft key to on the phone keyboard to enter the reboot warning interface:

5. WEB Interface

Web user interface (we will used Web UI for short in the following context) which is used for user or administration to check or change the IP SIP phone's settings.

- Press the OK key on the phone keyboard to check the Phone's IP address.
- Type the IP address on IE: <u>http://192.168.10.170</u> input default User Name and Password: admin/admin to login the web interface.

Login User Name Password	admin ••••• Remember Username/Password Login	Help Login Page

5.1. Status->Basic

1. First you need to open a browser (for example IE)

2. Input the IP address in the browser's address bar and then press the Enter key

3. If successfully connected to IP phone, it will prompt a login page. In the page, please input the username and password accordingly.by default, username and password is as below:

User Name: admin

Password: admin

4. After successfully logged in, it will automatically locate to **Status->Basic** Page, as figure below shown:

Sections	Description
SIP Account	To display and configure the specific Account settings.
	• Status:To display register result.
	• Display Label:Which is displayed on the phone's LCD
	screen.
	• Display Name:Which is sent to the other call party for
	displaying.
	• Rigister Name:Allocated by SIP server provider, used for
	authentication.
	• User Name:Allocated by your SIP server provide, used for
	authenticaion.
	Password: Used for authorization.
SIP Server 1	To display and configure Primary SIP server settings.
	• Server IP:SIP server address, it could be an URL or IP
	address.
	• Registration Period:The registration will expire after
	Registratipn period.The IP phone will re-register
	automatcially within registration period.
SIP Server 2	To display and configure Secondary SIP server settings.

	This is for redundancy, if registering to Primary SIP server	
	fails,the IP phone will go to Secondary SIP server for	
	registering.	
	Note : Secondary SIP server is used for redundancy, it can be	
	left blank if there is not redundancy SIP server in user's	
	_	
	environment.	
Outbound Proxy Server	To display and configure Outbound Proxy server settings.	
	An outbound proxy server is used to receive all initiating	
	request messages and route them to the designated SIP	
	server.	
	Note: If configured, all SIP request messages from the IP	
	phone will be sent to the outbound proxy server forcefully.	
Transport Type	To display and configure Transport type for SIP message	
	• UDP:UDP is an unreliable but very efficient transport	
	layer protocol.	
	 TCP:Reliable but less-efficient transport layer protocol. 	
	• TLS:Secured and Reliable transport layer protocol.	
	 DNS-SRV: A DNS RR for specifying the location of 	
	services.	
NAT		
NAT	To display and configure NAT(Net Address Translator)	
	settings.	
	• STUN:Short for Simple Traversal of UDP over NATS,a	
	solution to solve NAT issues.	
	Note: By default,NAT is disabled.	

5.3. Account->Advanced

Sections		Des	cription	
SIP Account	To display current Account settings or to select which accoun		select which account	
	to display.			
Codecs	To display and configure available/unavailable codecs list.			
	Codec mean	s coder-decoder	which is use	ed to transfer analog
	signal to digital signal or vice versa.			
	Familiar	codecs	are	PCMU(G711U),

	PCMA(G711A),G722(wid-bandth codecs),G723,G726,G729 and so on.
Subscribe	 To display and configure MWI,BLF,ACD subscription settings. MWI:Message Waiting Indicator which is used to indicate whether there is unread new voice message. BLF:BLF is short for Busy Lamp Field which is used to monitor the designated extension status. ACD:Automatic Call Distribution is often used in offices for customer service, such as call center. The setting here is to negotiate with the server about expire time of ACD subscription.
DTMF	 To display and configure DTMF settings. Type:Support Inband,Info,RFC2833 or their combination. How To Notify DTMF:Only available when DTMF Type is Info. DTMF Payload:To configure payload type for DTMF. Note: By default,DTMF type is RFC2833 which is the standard.Type Inband uses inband frequency to indicate DTMF tone which is most used to be compatible to traditional telephone server.Type Info use SIP Info message to indicate DTMF message.
Call	 To display and configure call-related features. Max Local SIP Port:To configure maximum local sip port for designated account. Min Local SIP Port:To configure minmum local sip port for designated account. Caller ID Header:To configure which Caller ID format to fetch for displaying on Phone UI. Auto Answer:If enabled,IP phone will be auto-answered when there is an incoming call for designated account. Ringtones: Choose the ringtone for each account. Provisioning Response ACK:100% reliability for all provisional message,this means it will send ACK every time the IP phone receive a provisional SIP message from SIP server. user=phone:If enabled,IP phone will send user=phone within SIP message. PTime:Interval time between two consecutive RTP packets. Anonymous Call:If enabled, all outgoing call for the designated account will be anonymous number.

	rejected.
	• Is escape non Ascii character: To transfer the symbol to Ascii character.
	• Missed Call Log: To display the miss call log.
	• Prevent SIP Hacking: Enable to prevent SIP from hacking.
Music Server Address	To display or configure third-party MOH(music-on-hold)
	server.
	• Active:To enable or disable this MOH server,If enabled,the
	IP phone will play MOH from configured server.
Cossion Timon	 Music Server Address: To configure MOH server address. To diaphy or configure consist times acting a
Session Timer	 To display or configure session timer settings. Active: To enable or disable this feature, If enable, the
	• Active: To enable of disable this realize, if enable, the ongoing call will be disconnected automatcially once the
	session expired unless it's been refreshed by UAC or UAS.
	 Session Expire: Configure session expire time.
	 Session Refresher: To configure who should be response
	for refreshing a session.
	Note: UAC means User Agent Client, here stands for IP
	phone.UAS means User Agent Server, here stands for SIP
	server.
BLF List	To display or configure BLF List URI address.
	• BLF List URI:BLF List is short for Busy Lamp Field List.
	• BLFList PickUp Code: To set the BLF pick up code.
	• BLFList BargeIn Code: To set the BLF barge in code.
Broadsoft	To display or configure Broadsoft AOC feature.
	• AOC:A feature used to be accounting on Broadsoft
	platform.
Encryption	 To enable or disabled SRTP feature. ● Voice Encryption(SRTP):If enabled, all audio
	 Voice Encryption(SRTP):If enabled, all audio signal(technically speaking it's RTP streams) will be
	enctypted for more security.
NAT	To display NAT-related settings.
	 UDP keepalive message:If enabled,IP phone will send
	UDP keepalive message periodically to router to keep
	NAT port alive.
	• UDP Alive Msg Interval:Keepalive message interval.
	• Rport:Remote Port,if enabled,it will add Remote Port into
	outgoing SIP message for designated account.
Conference	To select Local or network conference.
	• Type: To select desired conference type
	• Conference URI: If network conference is selected, a
	network conference URI is needed to be input.
User Agent	One can customize User Agent field in the SIP message; If user
	agent is set to specific value, user could see the information

from PCAP. If user agent is not set by default, user could see
the company name, model number and firmware version
from PCAP

Sections	Description
LLDP	To display and configure LLDP settings.
	• LLDP Active: To enable or disable LLDP feature.
	• Packet interval:To configure the interval for LLDP
	message.
	Note: LLDP stands for Link Layer Discovery Protocol, it's used
	to exchange device information between any two
	directly-connected devices.LLDP is often used to configure
	Voice Vlan automatically for IP phone.
Local RTP	To display and configure Local RTP settings.
	• Max RTP Port:Determine the maximum port that RTP
	stream can use.
	• Min RTP Port:Determine the minmum port that RTP
	stream can use.
SNMP	To display and configure SNMP settings.
	• Active:To enable or disable SNMP feature.
	• Port: To configure SNMP server's port.
	• Trusted IP:To configure allowed SNMP server address,it
	could be an IP address or any valid URL domain name.
	Note: SNMP(Simple Network Management Protocols) is
	Internet-standard protocol for managing devices on IP
	networks.
VLAN	To display and configure VLAN settings.
	• LAN Port/PC Port:You can configure VLAN setting for
	both ports respectively.
	• Active:To enable or disable VLAN feature for designated
	port.
	• Vid:To configure VLAN id for designated port.
	• Priority:To select VLAN priority for designated port.
	Note: Please consult your administator for specific VLAN
	settings in your networking environment.
QoS	To display and configure QoS settings.
	• SIP QoS:To configure QoS value for all SIP message.
	• Voice QoS:To configure QoS value for all audio
	stream(RTP streams).
TR069	To display and configure TR069 settings.
	• Active:To enable or disable TR069 feature.
	• Version:To select supported TR069 version (version
	1.0 or 1.1).
	• ACS/CPE:ACS is short for Auto configuration servers as
	server side, CPE is short for Customer-premise
	equipment as client side devices.
	• URL: To configure URL address for ACS or CPE.

	• User name: To configure username for ACS or CPE.			
	• Password:To configure Password for ACS or CPE.			
	• Periodic Inform:To enable periodically inform.			
	• Periodic Interval:To configure interval for periodic			
	inform.			
	Note: TR-069(Technical Report 069) is a technical			
	specification entitled CPE WAN Management Protocol			
	(CWMP).It defines an application layer protocol for remote			
	management of end-user devices.			
802.1x	To display and configure 802.1x settings.			
	• 802.1x Mode: To enable or disable 802.1x.			
	• Identity: To input identity if 802.1x is enabled.			
	• MD5 password: To input MD5 password if 802.1 is			
	enabled.			
VPN	To display and configure VPN settings.			
	• Active:To enable or disable VPN feature.			
	• Upload:To upload VPN client configuration file which is			
	used to connect to VPN server.			
	Note: For now, IP phone can only support OpenVPN.

Sections	Description		
Web Language	To choose the web language.		
LCD Language	To choose the phone language.		
Format Setting	To configure time display settings.		
	 Time Format: Determine what format to display on Phone UI(12 hour/24 hour). Date Format: Determine what format to display on Phone UI for Date. Display Mode: Determine what mode to display Time&Date on Phone UI. 		
Туре	To select how to configure time, it could be set by manually or		

	get from INTERNET automatically via NTP server.			
	 Manual: To set Time and Date manually. 			
	• Auto:To get Time via NTP server.			
	Note : If you set time to be Manually, it only tak effect till next			
	reboot,after reboot, the phone will switch to Auto mode			
	automatically,because there is no way for IP phone to record			
	time during power off.			
NTP	To configure NTP server related settings.			
	• Time Zone:To select local Time Zone for NTP server.			
	• Primary Server:To configure primary NTP server			
	address.			
	• Secondary Server: To configure secondary NTP server			
	address, it takes effect if primary NTP server is			
	unreachable.			
	• Update interval:To configure interval between two			
	consecutive NTP requests.			
	Note: NTP,Network Time Protocol is used to automactially			
	synchorize local time with INTERNET time, since NTP server			
	only response GMT time, so that you need to specify the Time			
	Zone for IP phone to decide the local time.			
Daylight Saving Time	To display or configure DST settings.			
	Note: Here DST, is short for Daylight saving time, which			
	stands for the time in the summer days when sun rises early			
	will be adjusted forward to save daylight. The DST will take			
	effects during the period that set by user. (all the settings for			
	DST are all self-explanatory, please consult with your			
	administrator for local DST details).

Sections	Description		
Mode	To enable or disable feature key sync.		
	• Feature Key Sync: To enable or disable feature key sync.		
	• Mode: Select the desired mode.		
Forward Transfer	To display and configure Forward setting.		
	Note: There are three types of forward: Always Forward,Busy		
	Forward and No answer Forward.		
	• Always Forward: Any incoming call will be forwarded in		
	any situation.		
	• Busy Forward: An incoming call will be forwarded if IP		
	phone is busy.		
	• No answer Forward: An incoming call will be forwarded		
	if it's no answer after a specific time.		

Call Waiting	To enable or disable Call Waiting.
	 Call Waiting Enable: If enabled, it allows IP phones to
	receive a new incoming call when there is already an
	active call.
	 Call Waiting Tone: If enabled, it allows IP phones to play
	the call waiting tone to the waiting callee.
Auto Redial	Auto redial allows IP phones to redial an unsuccessful call for
	designated times within desinated interval.
	 Auto Redial:To enable or disable auto redial feature.
	• Auto Redial Interval:Determine the interval between two
	consecutive attempts.
	• Auto Redial Times:Determine how many times to redial.
DND	• DND(Do Not Disturb) allows IP phones to ignore any
	incoming calls.
	• Return Code when DND:Determine what response code
	should be sent back to server when there is an incoming
	call if DND on.
	• DND On Code:The Code used to turn on DND on server's
	side, if configured, IP phone will send a SIP message to
	server to turn on DND on server side if you press DND
	when DND is off.
	• DND Off Code: The Code used to turn off DND on server's
	side, if configured,IP phone will send a SIP message to
	server to turn off DND on server side if you press DND
C.U.P. LU	when DND is on.
Call PickUp	• Visual BLF PickUp Alert: To enable the BLF pick up function.
Call Park	
	Call park allows users to park a call to a special extension and then retrieve it via any other phone within the same
	system.
	 Active: To enable or disable call park feature.
	 Account: To determine which account to take effect.
	 Target: To configure a designated target extension.
	Note : Please consult with your telephony system
	administrator for special extension on your system.
Intercom	Intercom allow user to establish a call directly with the callee.
	• Active:To enable or disable Intercom feature.
	• Intercom Mute:If enabled, once the call established,the
	callee will be muted.
HotLine	HotLine allows user to call out a defined number
	automatically after hearing the dailtone without dialing any n
	umber.
	• Active: To enable or disable HotLine feature.
	• Number: To set the defined HotLine number.

	• Delay Time: To set the automatically call out interval afte
	r hearing the dailtone.
ACD	ACD(Automatic Call Distribution) is most used in call-center
	market, it allows IP phone to login the system with multiple
	status so that the system could distribute an incoming calls to
	avaialbe user or agents.
	• ACD Activated Auto: If enabled, Agent status will turn to
	avaible automatically within a designated time(decided
	by ACD Activated Auto Timer).
	• ACD Activated Auto Timer: To configure interval when
	will Agent status becomes available automatically.
	• ACD Pwd Required: To enable the ACD password
Remote Control	Remote Control allows specific host to interact with IP phone
	by sending HTTP or HTTPS requests. The specific action could
	be answering an incoming call, hangup an ongoing call and so
	on.
	• Allowed Access IP List:To configure the allowed host
	address.
	Note: Fow now, IP phone can only support IP address, IP
	address list and IP address pattern as allowed hosts
Keypad Lock	Keypad Lock allows to lock the keypad of your phone
	temporarily when you are not using it. This feature helps to
	protect your phone from unauthorized use.
	• Keypad Lock Type: To lock the phone with function keys
	or all keys;
	• Keypad Unlock PIN: To lock the phone with a password.
	• Keypad Lock Timeout: the idle interval to lock the phone
Key As Send	Key As Send allows you to disable send key or assign pound
	key as send key.
Others	• Return Code When Refuse:Allows user to assign specific
	code as return code to SIP server when an incoming call
	is rejected.
	• Auto Answer Delay: To configure delay time before an
	incoming call is automatically answered.
	• Early DTMF: To enable or disable early DTMF

Sections	Description
Echo Canceller	Echo Canceller: To remove acoustic echo from a voice
	communication in order to improve the voice quality .
	• VAD (Voice Activity Detection):Allow IP phone to detect
	the presence or absence of human speech during a call.
	When detecting period of "silence", VAD replaces that
	silence efficiently with special packets that indicate
	silence is occurring. It can facilitate speech processing,
	and deactivate some processes during non-speech
	section of an audio session. It can avoid unnecessary
	coding or transmission of silence packets in VoIP
	applications, saving on computation and network
	bandwidth.
	• CNG (Comfort Noise Generation):allow IP phone to
	generate comfortable background noise for voice
	communications during periods of silence in a

	conversation. It is a part of the silence suppression or
	VAD handling for VoIP technology. CNG,in conjunction
	with VAD algorithms, quickly responds when periods of
	silence occur and inserts artificial noise until voice
	activity resumes. The insertion of artificial noise gives
	the illusion of a constant transmission stream, so that
	background sound is consistent throughout the call and
	the listener does not think the line has released.
Jitter Buffer	Jitter buffer is a shared data area where voice packets can be
	collected, stored, and sent to the voice processor in even
	intervals. Jitter is a term indicating variations in packet arrival
	time, which can occur because of network congestion, timing
	drift or route changes. The jitter buffer, located at the
	receiving end of the voice connection, intentionally delays the
	arriving packets so that the end user experiences a clear
	connection with very little sound distortion.
	IP phones support two types of jitter buffers:fixed and
	adaptive.
	Fixed:Add the fixed delay to voice packets. You can configure
	the delay time for the static jitter buffer on IP phones.
	Adaptive:Capable of adapting the changes in the network's
	delay. The range of the delay time for the dynamic jitter buffer
	added to packets can be also configured on IP phones.
Mic Volume	To configure Microphone volume for headset, handset or
	speaker mode.

Sections	Description
PNP Option DHCP Option	 To display and configure PNP setting for Auto Provisioning. PNP: Plug and Play, once PNP is enabled, the phone will send SIP subscription message to PNP server automatically to get Auto Provisioning server's address. By default, this SIP message is sent to multicast address 224.0.1.75(PNP server address by standard). To display and configure custom DHCP option. DHCP option: If configured, IP Phone will use designated DHCP option to get Auto Provisioning server's address via DHCP. This setting require DHCP server to support corresponding
Manual Update Server	 option. To display and configure manual update server's settings. URL:Auto provisioning server address. User name:Configue if server needs an username to access,otherwise left blank. Password: Configure if server needs a password to access,otherwise left blank. Common AES Key: Used for IP phone to decipher common Auto Provisioning configuration file(for VP53,this configuratin file is 000000000053.conf). AES Key(MAC):Used for IP phone to decipher MAC-oriented auto provioning configuration file(for example, file name could be 0c11058888888.conf if IP phone's MAC address is 0c1105888888. Note: AES is one of many encryption, it should be configure only configure filed is ciphered with AES, otherwise left blank.
AutoP	To display and configure Auto Provisioning mode settings. This Auto Provisioning mode is actually self-explanatory. For example, mode "Power on" means IP phone will go to do Provisioning every time it powers on.
System Log	 To display syslog level and export syslog file. Syslog level: From level 0~7.The higher level means the more specific syslog is saved to a temporary file. By default, it's level 3. Export Log: Click to export temporary syslog file to local PC. Remote System Log: To enable or disable Remote System Log. Remote System Server: To input the syslog server address.
РСАР	To start, stop packets capturing or to export captured Packet file.

	• Start:To start capturing all the packets file sent or
	received from IP phone.
	• Stop:To stop capturing packets.
	Note:IP phone will save captured packets file to a temporary
	file,this file maximum size is 1M(mega bytes), and will top
	capturing once reaching this maximum size.
Others	To display or configure others features from this page.
	Confile file: To export or import configure file for IP phone.

Sections	Description
Web Server Certificate	To display or delete Certificate which is used when IP phone is
	connected from any incoming HTTPs request.
	Note: The default certificate could not be deleted.
Web Server Certificate	To upload a certificate file, this will be used as server
Upload	certificate.
Client Certificate	To display or delete Certificates which is used when IP phone
	is connecting to any HTTPs server.
Client Certificate Upload	To upload certificate files which is used as client certificate.
	• Only Accept trusted Certificates: If this option is enabled,
	only trusted certificates will be accepted.

6.Troubleshooting

Issue 1 : The LCD does not light up

- Check the AC power adapter. Make sure it is the one provided in your package.
- Check the power outlet. Make sure that the power that outlet you are plugging your device into is working. Try to plug a different device into the socket to make sure it has power.

Issue 2 : No signal tone heard from the handset

• Check the connection cord between the handset and the phone. Make sure it is connected properly.

Issue 3 : Cannot access the web interface

- Check the connection between the PC port of the device and the network port of the computer. Make sure it is fine.
- Check whether the IP address of the device is correct.
- If it is LAN, please make sure there is no IP address collision with other devices on the network.

Issue 4 : Cannot call out

- Please see the network connection status of device, if it is exception, and then check the connection of network.
- If the network connection is normal, please check whether the device has registered successfully.
- If the network connection and the registered are both normal, please confirm whether the dial rule is correct, or please communicate with the service operator.
